NYC Urban View

Abstract:

Buying or renting a home is one of the most important and basic thing for a living. And, there are a lot of homes available for sale/rent, but people always get struck with some doubts about the house location like:

"*Whether is it a safe location with less crimes?*"

"*Does it have any schools nearby?*"

"*Any recreation parks in that area?*"

And this goes on...

So, to address this problem we are coming up with a web-application for NYC, where you can search for a location and it will give you all the important details about crime, school, air pollution, water quality, recreation, vehicle collisions etc. at that location, visualizing the data from NYC open data sets on top of Google Maps.
